

ROCKWOOD® CLASSIC 6"

Classic 6" Blocks were designed with professional wall builders in mind. It allows for Architectural flexibility without having to sacrifice stability. The Classic block is manufactured with an anchor bar built right in that allows a 3/4" or 1" setback on every course. No need to use costly, time consuming pins or clips with the Classic System. You can build a retaining wall up to 48" in height without worrying about soil stabilization. If you wish to build a wall higher than 48", you should consider consulting an engineer. He will determine the amount and the placement of geo-grid in your project. Classic Universal Caps come in all of the colors that are offered in our Classic blocks. They get installed in a variety of ways. Most of the time, they are installed hanging over the front of the top course by about 1". The project is then completed by gluing the top course with "Super-Stik" adhesive.

Versatile and easy to install, available in 5 standard colors to compliment any design or have your own color created.

For more information and a complete installation manual please refer to:
